

IS YOUR VEHICLE ACCESS SYSTEM AN ASSET OR LIABILITY?

FEIG

Vehicle access systems need to increase security, protect parking availability, and collect data. When that doesn't happen, your asset becomes a liability. RFID vehicle access systems from FEIG make parking access into an asset.

RELIABLE

FEIG readers are reliable and built for the elements. They last for years, saving replacement costs due to dirt, temperature changes, and weather.

ISO RFID TAGS

FEIG systems use ISO-based non-proprietary tags so you can order from a variety of sources, customize for your branding, save money and easily add users.

SECURITY

RFID is more secure than license plate recognition, barcode, keypads or Prox cards. Highly encrypted RFID tags cannot be copied.

HIGH THROUGHPUT

RFID from FEIG is so fast a vehicle barely needs to slow down coming through the gate.

SAVE MONEY

One RFID reader serves two lanes of traffic and also can be used as a standalone access control unit with FEIG's free myAXXESS software.

REMOTE MAINTENANCE

Remote access to readers means less maintenance and fewer troubleshooting and repair personnel. And that means lower cost.
